Randy Otanez
MMP 100
Final project

The final animation ended up being different from the frame I included in the brief. My project is a comic, Photoshop and Illustrator are the tools I use to design some elements that I draw and the images have filters applied to them. And for the animated video use after effect. Then I embed my story in a web page that I design using HTML/CSS/temple, with the title, my name, and background color.
